Background note

Lepel district is located in the south-west of the Vitebsk region and is bordered on the Beshenkovichi, Borisov, Dokshitsy, Ushachi and Chashniki regions. There are 136 lakes and 20 rivers on the territory of the district.

The administrative, cultural and economic center of the district is the city of Lepel which is 110 kilometers from Vitebsk, 150 kilometers from Minsk, 100 kilometers from Orsha and 60 kilometers from Polotsk.

In order to develop tourism in Lepel district the land plots with an estimated area from 0.19 hectares to 5.99 hectares have been selected for the construction of tourist facilities in picturesque and attractive places ranging from 10 to 150 meters from the lakes water level with access roads with improved gravel or asphalt pavement. These places are popular with both locals and guests who visit the Lepel district.

Most of the land plots offered for provision are small-contour and not convenient for processing with large-sized equipment.

Placing new tourism facilities in the future for Lepel district envisages the effective use of the tourist potential of the region. It includes the presence in the territory of the Berezinsky Biosphere reserve of children's rehabilitation and recreation center "Jemchujina", the state institution "Lepel Military Sanatorium of the Armed Forces of the Republic of Belarus", as well as favorable geographical position, availability of recreational resources and historical and cultural unique intangible heritage. Thus, recreational resources are considered as one of the factors for the development of tourism activities and the appearance of new campsites.

The assessment of the economic feasibility of building of the selected objects even partly is generally positive, as after the completion of construction of tourist facilities, new jobs will be provided and the attractiveness of the countryside will be used by creating possibilities for this type of activity.

The creation of new bases will produce competition, and contribute to the ensuring of availability of tourism, shaping the idea of the Republic of Belarus as an attractive country for tourists, as well as the development of local tourism within the Lepel region.

The creation of new tourist facilities will not require additional budget expenditures.

One of the aims of state regulation in the field of tourism is the formation of the idea of the Lepel district and, in general, of the Republic of Belarus as an attractive country for tourists.
